# 50,000+

members

Network, collaborate and be inspired as part of Australia's largest tech community.

## Introducing ACS SFIA Digital Badges

ACS is an official SFIA (Skills Framework for the Information Age) partner and is licensed to utilise the skills framework to support the digital community in Australia.

ACS SFIA Digital Badges enable IT providers tendering for public sector contracts to demonstrate the quality of their people, and their compliance with government obligations.

**Build your reputation as a provider of first-class IT professionals.** ACS SFIA Digital Badges are verified through Credly, the digital credentials platform designed and built by Pearson. Credly provides a one-click way to verify the skills and expertise of individual IT professionals and prove the quality of your tender.

**Demonstrate compliance and stand out as a preferred supplier.** Public sector procurement policies stipulate the skills and expertise required to fulfil contracts. ACS SFIA Digital Badges show your alignment to contractual obligations and help position your company as a preferred supplier of IT professionals.

**Maximise the value of your IT professionals.** Many businesses work to a rate card, which aligns to the capabilities of IT professionals. ACS SFIA Digital Badges provide verification of an individual's skills and expertise and, therefore, a reliable way to confirm rate cards and avoid under-payment for talent.

**Promote your commitment to continuous learning.** ACS SFIA Digital Badges are available across 121 in-demand skills and at distinct levels of competency, enabling employers to encourage a culture of continuous improvement as employees obtain new skills and higher attainment.

Build your company's reputation as a trusted provider of IT professionals, contact ACS today to discuss ACS SFIA Digital Badges:
